

# Custom Hot Vines

Hot Vines look like natural vines but have "hot" electrified elements every 9" along the trunk. Hot Vines are energized by off-the-shelf electric fence chargers (sold separately). Hot Vines are suitable for most animals and can be used on trees, walls, columns or rockwork. For special cases, like orangutans and otters, we recommend our Custom Hot Vines which include the addition of extra copper wire extensions. These extension wires are attached to the "hot" tentacles on the vine and are arranged to come into contact with an approaching animal.
